

Silage Pit Mats

Protecting Silage

Our heavy duty Silage mats are used to cover silage or maize in pits. They will not blow off or lift in the wind.

The weight is evenly spread across and mould to the shape of the pit ensuring a tight air seal is maintained.

It has been proven using silage mats helps slow down decomposition this helps reduce the volume of effluent.

Our Supermat Silage Mat provide total protection against birds. Birds cannot peck through as there is no holes and our utility and hollowmats have very small holes giving a lot more protection than tyres.

Protecting Livestock

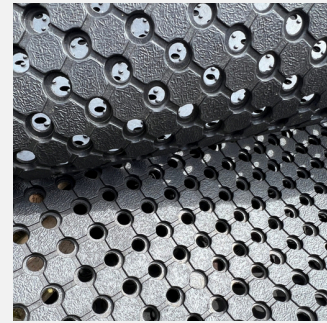

Metal decomposition can occur in old tyres that can contaminate feed stock our mats are 100% rubber.

It is said the better the seal the better quality of silage with in turn helps with milk quality / yield in Dairy herds and weight gain in Livestock.

Protecting Yourself and Others

Water runs off the mats with ease resulting in less pools of stagnant water that can act as a breeding ground for infections like weils disease.

Our mats are 100% rubber you will not find metal or other fillers in our mats eliminating the risk of piercing skin this can cause tetanus, blood poisoning and contamination.

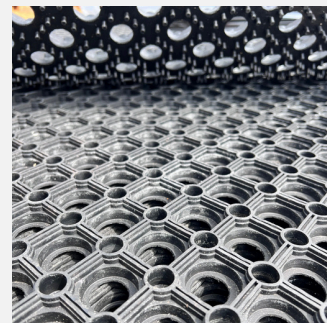

UTILITY MAT

Depth - 11mm

Size - 120cm x 180cm

Weight - 18 kg

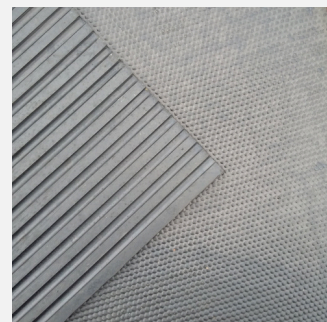

HOLLOWMAT

Depth - 23mm

Size - 100cm x 150cm

Weight - 15kg

SUPERMAT

Depth - 12mm

Size - 120cm x 180cm

Weight - 28kg
